## **Detailed Action**

### ***Response to Arguments***

Applicant's arguments, see pages 2-5, filed 12/26/06, with respect to the rejection(s) of claim(s) 1-2 under 35 U.S.C. 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Ji, US Patent No. 6,272,641.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Ji (US Patent No. 6,272,641).

#### **As per claim 1, Ji teaches:**

A method of detecting malicious scripts using code insertion technique, comprising the step of:  
checking values related to each sentence belonging to call sequences by using method call sequence  
detection based on rules including matching rules and relation rules,

*[see col. 4, paragraph 5]*

wherein the checking step comprises the steps of:

inserting a self-detection routine (malicious behavior detection routine) call sentence before and after a method call sentence of an original script; and

*[see col. 3, paragraph 3]*

detecting the malicious codes during execution of the script through a self-detection routine inserted into the original script.

*[see col. 3, paragraph 4]*

**As per claim 2, Ji teaches:**

The method according to claim 1, herein the self-detection routine call sentence is composed of sentences for storing parameters and return values and calling a detection engine, said sentences being inserted before and after the method call sentence when the method call sentence matches with contents described in the matching rule, and wherein the self-detection routine includes a rule-based detection engine for executing for executing the relation rule related to a relevant matching rule when a method corresponding to the matching rule is called and detecting the presence of malicious behavior of the method call sequence, and methods for causing the parameters and return values of the method call sentence satisfying the matching rule to be stored into a buffer usable by the detection engine.
